

March 16, 1966

Thank you for your very kind courtesy on Friday, March 4, 1966. I appreciated the opportunity to discuss mutual technical interests with you.

In respect to your X-Y Plotter, I readily appreciate your desire to eliminate your present wet process silver halide copy material and substitute a dry process material. In addition to the consideration of recording on dry processed transparent film, two other possibilities come to mind:

- (a.) Provide a convenient automatic processing capability for your presently used silver halide film which would process your present film on the spot within a few minutes.
- (b.) Record on paper stock and provide a convenient automatic capability of printing the paper stock onto transparency material.

Neither of the two alternatives are as attractive as original recording on dry process film, but they might be useful as interim solutions.

If you wish me to investigate the applicability of any or of all three of the above possibilities, I would be happy to be of service.  said during our conversation that last summer one of your temporary employees had made a survey of dry process recording materials and the information

Declass Review by NGA.

collected was sent in a report to [Redacted]
[Redacted] If that report can be made available,
it would be a useful starting point, rather than my
recovering the same ground. Incidentally, my pre-
liminary inquiry indicates that the sensitivity of
the Xerox process may be within a factor of two of
the requirements of your X-Y Plotter.

If I may be of service, please call on me.

Sincerely yours,
